LAB WORKSHEET

Linux Command Line Lab

Manage a simulated Ubuntu server from the command line.

Key commands

```
pwd   ls -la   cd   mkdir -p   cp -r   mv   rm -r   cat   less   head   tail -f   nano (^O save, ^X exit)
grep -i -n -r "text" file   find / -name "*.conf" 2>/dev/null   wc -l   sort   uniq -c   cut -d, -f1
chmod 755 / u+x / go-w   (r=4 w=2 x=1)     chown user:group     chgrp
sudo adduser amira   sudo usermod -aG webdev amira   id   groups   passwd
systemctl status|start|enable --now apache2   journalctl -u ssh   ps aux   top   kill PID
sudo apt update   sudo apt install apache2
ip a   ip route   ping -c 4   ss -tulpn   nslookup   curl http://localhost
sudo nano /etc/netplan/00-installer-config.yaml   sudo netplan apply   (spaces only, never tabs)
tar -czvf backup.tar.gz folder/
```

Tasks

Guided: 12 steps (folders, nano, permissions and scripts, users and groups, Apache, auth.log, netplan, tar).
Independent: hand over a web server against a 10-point checklist.
