LAB WORKSHEET

PowerShell Lab

Use Windows PowerShell for IT support: discover commands, work with objects, write scripts and manage Active Directory.

Key ideas

- Commands are **Verb-Noun** and pass **objects**, not text. Filter left, format right.
- Compare with `-eq -ne -gt -lt -like -match` — never ==.

Commands

```
Get-Command -Noun Service        Get-Help Get-Service -Examples        Get-Service | Get-Member
Get-Service | Where-Object Status -eq Running
Get-Process | Sort-Object CPU -Descending | Select-Object -First 5
Get-Process | Select-Object Name,Id,CPU | Export-Csv C:\IT\Reports\top5.csv -NoTypeInformation
New-Item C:\IT\Reports -ItemType Directory        Remove-Item … -WhatIf
Set-ExecutionPolicy RemoteSigned   then   .\health.ps1
Test-NetConnection oak-fs01 -Port 445        Resolve-DnsName        Get-NetIPAddress
Import-Module ActiveDirectory
Import-Csv new_starters.csv | ForEach-Object { New-ADUser … -Enabled $true }
Search-ADAccount -LockedOut | Unlock-ADAccount        Disable-ADAccount tbarker
```

Tasks

Guided: 12 steps from discovering commands to bulk-creating AD users. Independent: an 8-point IT support ticket, checked automatically.
